(57) **Abstract:** A communication apparatus has a controller (800) ; an interface (806; 850) adapted to receive an electronic message (852); a display (836); and a memory (802; 804). The memory is adapted to store image data representing at least one predefined icon to be presented on the display so as to indicate receipt of the electronic message. The memory (802, 804) is adapted to store an association (844, 846) between the or each predefined icon (846) and a sender (844) of electronic messages. The controller (800) is adapted to determine a sender (857) of the received electronic message (852), to match the sender thus determined with the or each predefined icon by way of the association, and to present a matching icon, if any, on the display to indicate receipt of said received electronic message as well as the sender thereof.
